RYK, Pakistan

- I worked as a Front-End Web Developer at Next Career Technologies focusing on building responsive and user-friendly web applications using HTML, CSS, and Bootstrap.
- I developed well-structured and flexible front-end architectures to support scalable web solutions.
- My role included modifying existing systems with various technologies and optimizing UI/UX for better performance.
- I conducted daily code reviews for the React.js team, assigned tasks based on developers experience.

Projects

EasyInput – Language Learning Web App

01/2025 – present

- EasyInput is a language learning web application designed to help users improve vocabulary and track their learning progress.
- Built with React.js and TypeScript, it offers a responsive UI and seamless user experience.
- The backend, powered by Node.js and MongoDB, ensures efficient data management and scalability.
- Key features include flashcard practice, word lists, progress tracking, and Chrome extension support.
- Users can select languages, follow guided learning paths, and stay motivated with streaks and weekly progress tracking.
- I developed the front-end architecture, integrated APIs, optimized performance, and ensured a modern and intuitive user experience.

- Crusader Fishing Room is an online sweepstakes gaming platform offering a variety of casino-style games, including slots and fish table games.
Developed with React.js for a smooth and responsive front-end and
- powered by Node.js, the platform ensures seamless gameplay and transaction processing.
- Users can easily choose a game, make deposits, and redeem winnings securely.
- Key features include third-party payment integration, user authentication, real-time updates, and a VIP support system.
I contributed to front-end development, API integration, performance
- optimization, and UI enhancements to deliver an engaging and user-friendly experience.

GEO STATE – Real Estate Management Platform

10/2024 – 12/2024

- GEO STATE is a modern real estate management platform designed to streamline property listings, client interactions, and transactions.
- Built with React.js for an intuitive and responsive front-end and powered by the .
- NET Framework for a robust and scalable backend, the platform offers a seamless user experience.
- Key features include advanced property search, interactive maps, real-time updates, user authentication, and secure payment integration.
- I worked on developing the front-end architecture, integrating APIs, optimizing performance, and enhancing UI/UX to ensure a smooth and engaging experience for users.

GLYPH – Digital Services Platform

11/2024 – 12/2024

- GLYPH is a comprehensive digital services platform offering website development, app development, 2D visuals, content writing, and more.
- Built with React.js for a dynamic and responsive front-end and powered by Node.js for efficient backend processing, the platform ensures seamless service management.
- Key features include service listing, client inquiries, real-time project tracking, secure payment integration, and user authentication.
- I contributed to developing the front-end architecture, integrating APIs, optimizing performance, and enhancing UI/UX to create a smooth and user-friendly experience for both clients and service providers.
